ADAM BOLTON
FRONT END WEB DEVELOPER

Summary

Front end web developer with a particular interest in UX/UI. Experience includes web development geared mainly towards education where I've enjoyed the capacity to create interactive and responsive applications that allow for a dynamic teaching style in assisting English language students. This has motivated me to push further in web development. Seeking a role where I can contribute to front end development with the goal of providing useful and reliable user experiences.

Employment

English Village
English Instructor   2018 to Current

- Conducting 1-to-1 classes with students of all ages and backgrounds, and tailoring lessons to their specific needs
- Developing original and interactive web applications for use in online lessons
- Maintaining strong communication skills - speaking and listening, as well as understanding and patience

Zephus
Foreign Investment Researcher   2015 to 2017

- Supervisory duties involving the teaching of in-house software to new team members
- Provided feedback on team members' work and quality checked historical deal records
- Worked collaboratively and under pressure to meet deadlines and weekly targets.

Projects

Let's Talk About
A conversation application made up of a collection of topics and questions for English conversation practice.

- Features expandable topic cards containing related lists of questions
- Provides filtering of categories via search bar
- Responsive across web and mobile devices

HTML, CSS, JavaScript

Read the Latest
A news application that displays the latest news stories by country or selected category.

- Connects to a back end built with custom endpoints
- Fetches data from the News API
- Displays data as news articles in a responsive grid layout

React, Node/Express, Material UI, Heroku

Online English School
A multi-page online English school website aimed to resemble a modern language learning platform.

- Implements major features of the React library: hooks, props, conditional rendering
- Utilizes a component-based structure and takes advantage of component reusability
- Facilitates seamless navigation between pages and in-page links via React Router

React, React Router
